

PeterConnects Add-On PagingConnector

PeterConnects PagingConnector provides seamless integration for linking Cisco Communications Manager to existing paging systems.

Protect paging investments

Enables seamless integration with virtually all in-house paging systems. Safeguards investments in existing paging system but allows migrate to Cisco's new IP communication solutions.

Meet Me

Meet Me requests allows the paged employee to return the call that is waiting from any IP telephone within the organisation. The caller is 'parked' until the paged employee dials a specific number that will link the caller and paged employee in a joined conversation.

Alternative destination

If responding too late, the called employee will be notified that the call has been forwarded to an alternative destination and asked if they also want to be routed to this destination.

Missed call

The original called employee is notified of the missed call via SMS and/or email.

Call Me

Call Me functionality requires the paged employee to call back the caller. This caller isn't waiting, the pager shows the caller's return number.

PagingConnector is sold as a separate product and works well with PeterConnects MessageBridge.
